

Amazon DSP Platform — Tenant Onboarding Checklist

Version: 2.0

Updated: September 22, 2026

Use this checklist to collect business configuration and source ownership. Do not place passwords, tokens, private keys, browser sessions, MFA seeds, or certificate contents in this document.

Credential rule: Configure secret values only through the tenant vault or the product's secure reconnect flow. Store only `secret://...` references in application records.

1. Company and tenant

- ☐ Legal company name and DBA
- ☐ Tenant display name and approved URL slug
- ☐ Business address, timezone, currency, and reporting-week start
- ☐ Primary operations contact and backup contact
- ☐ Billing contact and billing reference
- ☐ Data-retention and account-closure contacts

2. Amazon DSP operation

- ☐ DSP company ID and short code
- ☐ Station code, station name, address, and timezone
- ☐ Additional operating stations
- ☐ Normal route count and peak route count
- ☐ Typical daily package volume
- ☐ Amazon business coach and station contacts
- ☐ Scorecard reporting cadence and first historical week

3. Initial users and access

- ☐ Tenant owner name and verified email
- ☐ Additional administrators, reviewers, analysts, and viewers
- ☐ Software-token MFA communicated to every user
- ☐ Minimum required role confirmed for each user
- ☐ Approval contacts for disputes, payroll, and reimbursements
- ☐ Support impersonation policy acknowledged

4. Driver data

- ☐ Active and inactive driver roster
- ☐ Transporter IDs and payroll employee IDs
- ☐ Employment status, hire date, termination date, and home station
- ☐ Pay type, overtime policy, and payroll frequency
- ☐ Training, licensing, and document-expiration fields
- ☐ Historical roster effective dates

5. Fleet data

- ☐ VIN, van number, license plate, year, make, and model
- ☐ Ownership class and rental vendor
- ☐ Registration and insurance expiration dates
- ☐ Preventive-maintenance intervals and latest service
- ☐ DVIC readiness and out-of-service status
- ☐ PAVE / Wear & Tear evidence source
- ☐ EFR, LMR, rental, lease, and Amazon-owned classifications

6. Amazon connection

- ☐ Connection owner identified
- ☐ Secure browser-session handoff scheduled
- ☐ MFA recovery contact identified
- ☐ Company ID and station ID verified
- ☐ Required feeds confirmed: scorecards, supplementary reports, Delivery Execution, payments
- ☐ Reauthentication procedure and fallback email reports confirmed
- ☐ Expected refresh schedule and freshness thresholds approved

7. Payroll connection

- ☐ Provider and company code recorded
- ☐ API availability confirmed
- ☐ Client certificate ownership and expiration recorded
- ☐ Required secret names created in the tenant vault
- ☐ Pay-period boundaries and overtime rules confirmed
- ☐ Manual payroll-register fallback tested
- ☐ Employee identifier mapping validated

8. Accounting and reimbursement evidence

- ☐ Source selected: Digits, QuickBooks, API, or manual CSV/XLSX
- ☐ Included expense categories confirmed
- ☐ Never-reimbursable categories confirmed
- ☐ Vendor-to-Amazon-coverage rules reviewed
- ☐ Posting period and invoice basis documented
- ☐ Upload preview, vendor mapping, and confirmation owner assigned
- ☐ Known period totals selected for reconciliation testing

9. Optional vendor connections

For each rental, maintenance, fuel, insurance, telematics, or compliance provider:

- ☐ Provider and connection display name
- ☐ Authentication kind: API, browser session, IMAP, or manual upload
- ☐ Schedule and screens fed
- ☐ Secret reference names required (values excluded)
- ☐ Last-success and `needs_reauth` escalation contacts
- ☐ Manual fallback and export format

10. Product modules and feature access

- ☐ Executive dashboard
- ☐ Secure data integrations
- ☐ Fixed monthly fleet reconciliation
- ☐ Weekly payments and incentives
- ☐ Capacity and reliability review
- ☐ FIF reimbursements
- ☐ Fifth-day overtime support
- ☐ Next Mile tuition
- ☐ Program adjustments
- ☐ Tenant-specific disabled features recorded

11. Historical import and acceptance

- ☐ Historical date range approved
- ☐ Scorecard and payroll periods labeled independently
- ☐ Files malware-scanned and stored under the tenant prefix
- ☐ Row counts and source fingerprints recorded
- ☐ Known totals reproduced exactly
- ☐ Cross-tenant isolation test passed
- ☐ Empty/new-tenant screens verified without shared fallback data

12. Launch approval

- ☐ Tenant owner validates users, modules, and connections
- ☐ Dashboard freshness indicators reviewed
- ☐ Evaluation and dispute-preparation workflow tested
- ☐ External submissions remain approval-gated
- ☐ Audit trail reviewed
- ☐ Recovery contacts and support process delivered
- ☐ Production launch approved by tenant owner and platform administrator

Secure connection inventory

Source	Auth kind	Secret reference created	Schedule	Last-success owner	Reconnect owner
Amazon	Browser session / email fallback	☐			
ADP	API certificate / register upload	☐			
Accounting	API / manual upload	☐			
PAVE	API / portal	☐			
Other		☐			

Sign-off
